triBB01 Badge Notes

You have one of the first Beyond Binaries badges! It's a small run this year, so lucky you! Here's a little info to get you started.

Buttons

- Button 1 - Cycle color patterns
- Button 2 - Cycle color transitions
- Button 1 & 2 - Toggle Brightness (LOW - MEDIUM - HIGH - MAX)*

Adjust brightness at your own risk. The max setting will literally sear your all of your eyeballs.

Please Hack on this Badge!

One of the goals this year was to really lower the barrier to entry for hacking on this badge! In addition to the NeoPixel Jewels on the outside, on the inside you'll find a Trinket Mini 5V and some other goodies. The Trinket and Jewels are not soldered onto the board to make it easy to remove and use on your other projects! Or play around with the source and add your own features! (two extra pins on the board are just begging for some love.) You can get started at https://tribb01.party/badge.

Enjoy!

Special thanks to Avi for help concepting and to Twinkie for help testing and assembling.

If you want to support the development of this badge and future badges, feel free to contribute. Next year, we'll be scaling up production with a bigger build and a whole lot more badges.
